

What Is Vector Database

Stores data as high-dimensional vectors. Used for applications that require fast and accurate similarity search, such as image recognition, natural language processing, and recommendation systems

1

Relational Database

Stores data in tables. Well-suited for applications that require structured data, such as CRM and ERP

2

Graph Database

Stores data in a graph structure. Well-suited for applications that require complex relationships between data, such as social networks and knowledge graphs

3

Document Database

Stores data in documents. Well-suited for applications that require flexible data structures, such as content management systems (CMS) and e-commerce

4

Key Value Store

Stores data in a simple key-value pairs. Well-suited for applications that require fast and simple data storage, such as caching and session management.

5

OLAP

Online Analytical Processing is designed for complex data analysis. Used for applications that require multidimensional data analysis such as business intelligence
