Christiam Muñoz

Myth

1

Low-Code is only for
"non-programmers."

Reality

Low-Code simplifies
development for
beginners and benefits
experts.

Myth

2

Low-Code applications are simple and not powerful.

Reality

Modern platforms can create complex applications with advanced features and security.

Myth

3

Reality

No control over
customization.

You can fully
customize the
interface, business
logic, and integrations.

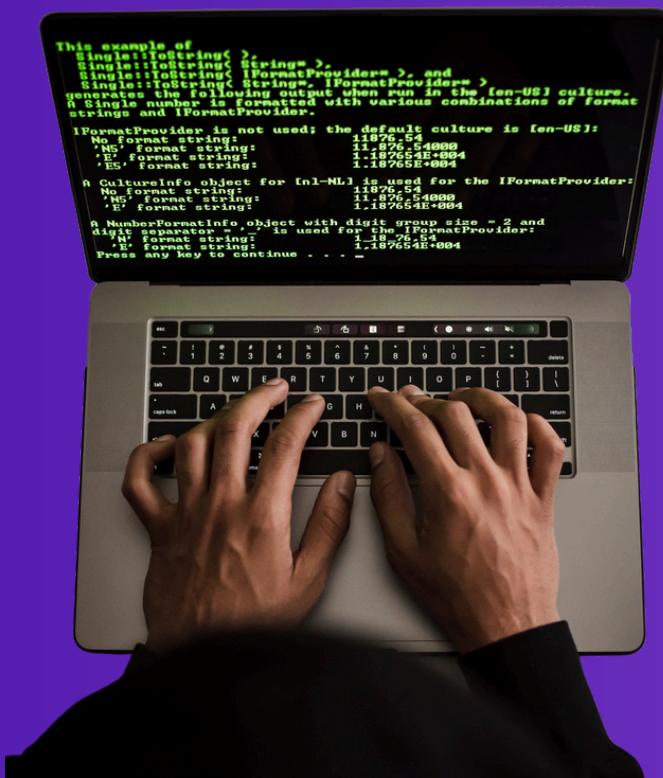

Myth

4

It's a new and unreliable technology.

Reality

Low-Code has been around for years and is backed by major tech companies.

Myth

5

Reality

Only applicable
to small
businesses.

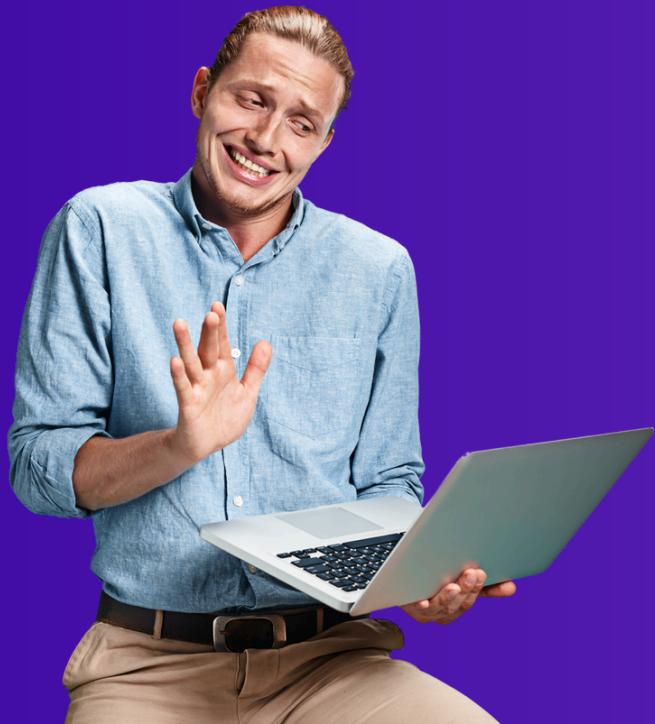

Suitable for all, from
startups to large
enterprises.

Myth

6

Reality

It limits
flexibility and
scalability.

Low-Code
platforms are
highly flexible and
scalable.

Myth

7

Reality
