Become outrageously rich.

WE DESIGN EVERY VOLVO TO LOOK LIKE THIS.

You're looking at a perfect Volvo. A Volvo that performed exactly as our safety engineers designed it to.

Its front and rear ends, for example, collapsed on impact. As a result, much of the crash energy was absorbed instead of being passed on to the passengers.

The car's middle section, however, didn't collapse. That's because the entire passenger compartment is surrounded by Volvo's unique "safety cage." Made of six box-section steel pillars, this protective housing is strong enough to support the weight of six Volvos.

Not the passengers of this car were also protected in ways you can't see. Because inside are such standard features as a driver's side Supplemental Restraint System, a collapsible steering column and, of course, 3-point seat belts, front and rear.

Every Volvo is designed to help protect its passengers in all these ways. And, as a result, will look remarkably similar to this one after being in the same type of accident.

If you're concerned about safety, you can't find a more beautiful car.
